Education Datasheet

Foundstone Security Education Learning to Protect Your Assets

Foundstone Professional Services provides a comprehensive network security training curriculum designed to meet the needs of individuals, departments, and organizations to develop highly skilled security professionals.

Protecting critical digital assets is one of the most important business issues today, and companies must address it continuously. Securing an enterprise demands proactive and constant vigilance by the right people with the right expertise. Make the investment in your employees today for a more secure environment tomorrow.

The Hacking Series

4-Day Courses

Essentials of Hacking

Foundstone's Essentials of Hacking class provides you with hands-on experience using the tools, techniques, and methodologies to identify system and network vulnerabilities and to design and implement effective security countermeasures.

Ultimate Hacking

This course teaches you step-by-step procedures for executing attack and penetration assessments to ensure Internet, intranet, and host-level security. Learn how to leverage these security techniques to identify the most critical threats to your company's most critical assets.

Ultimate Hacking Expert

This advanced class provides the latest knowledge and weapons to defend against sophisticated attacks while showcasing how to safeguard their organization's critical information assets.

Description	Cost
4 day Hacking Course Public Prepaid	\$3,995
4 day Hacking Course Private Onsite (up to 12 students)	\$30,000
4 day Hacking Course Private Onsite Additional student	\$1,400

3-Day Courses

Ultimate Hacking Windows Security

Learn how to secure, in detail, Windows hosts, Active Directory, and the most common Microsoft applications using built-in, free tools.

Ultimate Hacking Wireless Security

Foundstone's internationally renowned, "Ultimate Hacking: Hands On" series goes wireless to help you see your wireless networks the way hackers see them. Learn the tools, techniques and methods attackers use against you in order to develop an effective defense against their increasingly sophisticated onslaught.

Ultimate Web Hacking

This class provides security professionals with the knowledge and tools to recognize software vulnerabilities, develop countermeasures, and perform ongoing assessments of these internet facing applications.

Description	Cost
3 day Hacking Course Public Prepaid	\$2,995
3 day Hacking Course Private Onsite (up to 12 students)	\$24,000
3 day Hacking Course Private Onsite Additional student	\$1,400

Secure Coding Courses

4-Day Courses

Writing Secure Code: ASP.NET

Understand the key security features of the .NET platform, the common web security pitfalls developers make and how to build secure and reliable web applications using ASP.NET. Students are lead through hands on code examples that highlight issues and prescribe solutions.

Writing Secure Code: JAVA (J2EE)

Understand the key security features of the Java 2, Enterprise Edition (J2EE) platform, the common web security pitfalls developers make and how to build secure and reliable web applications using Java.

Writing Secure Code: C++

Understand the key security features of the C++ platform, the common web security pitfalls developers make and how to build secure and reliable web applications using C++.

Building Secure Software

Learn the process and concepts of building secure software including how to define and design secure software solutions (with an emphasis on web applications), select the appropriate techniques and technologies, and understand the underlying mechanisms which can be used as building blocks to successfully create secure software.

Description	Cost
4 day Secure Coding Course Public Prepaid	\$3,995
4 day Secure Coding Course Private Onsite (up to 12 students)	\$30,000
4 day Secure Coding Course Private Onsite Additional student	\$1,400

Custom classes available for other languages.

Certification Courses

5-Day Courses

CISSP Prep Course

The Foundstone CISSP Prep Course is designed for the security professional that is preparing to take the Certified Information System Professional exam provided by ISC2™

Certified Ethical Hacker (CEH) Prep Course

The CEH course is based on the EC Council's standards and guidelines for instruction and prep for their CEH certification test. Not only will you gain the necessary knowledge to pass the exam, you will experience the real-world knowledge of the Foundstone instructors and how each module pertains to the real world of penetration testing, not just book knowledge.

Description	Cost
5 day Certification Prep Course Public Prepaid	\$2,400
5 day Certification Prep Course Private Onsite (up to 12 students)	\$18,500
5 day Certification Prep Course Private Onsite Additional student	\$1,000
