Services Datasheet

Wireless Security Assessment

BENEFITS

- Identifies access points and rogue devices
- Analyzes security configurations
- Tests for vulnerabilities
- Implements security policies that minimize risk

DELIVERABLES

Our deliverables include:

- Wireless Security Assessment Technical Report
- Wireless Security Assessment Executive Summary
- Next-step recommendations
- Half-day workshop with Wireless Security Assessment Presentation

RELATED FOUNDSTONE SERVICES

- Firewall Assessment
- VPN Assessment
- Foundstone Training
- Comprehensive Network and Infrastructure Security Assessment

Malicious intruders are constantly probing networks for access points for misconfigurations, vulnerabilities, and weak security controls to compromise network defenses. The growth in the use of remote access to networks through wireless technologies has opened the floodgates to would-be intruders and has increased risk to organizations.

Foundstone has extensive experience helping clients identify access points and rogue devices, analyze their security configurations, test for vulnerabilities, and implement security policies that minimize this risk.

Foundstone's Wireless Security Assessments meet the security challenges of business-critical wireless technologies. These technologies pose unique threats because their signals propagate outside physical boundaries and are therefore difficult to control. Misconfigurations and weak security protocols allow for unauthorized eavesdropping and easy access.

Methodology

Foundstone has pioneered cutting-edge techniques for evaluating wireless networks. Understanding how enterprise vulnerabilities are exploited and how to measure subsequent risks allows our experts to create the right solutions to secure your critical assets.

Working with your staff, Foundstone consultants identify and inventory all wireless network access points, identify and exploit weaknesses in the wireless network, and assess the overall exposure of the company to wireless network attacks. They then recommend the best methods to secure the environment based on internal business requirements and best practices for wireless security.

Discounted Retesting

Foundstone partners with your organization in attaining its strategic security goals. At the conclusion of this engagement, Foundstone will list all discovered vulnerabilities based upon a ranking of high, medium, and low. At a discounted rate, Foundstone will perform a retest of each of the discovered vulnerabilities within three months of the completion of your engagement. This will allow you to validate that your security remediation efforts resolved all Foundstone discovered vulnerabilities. Please contact a sales representative for pricing information.

The Foundstone Difference

All Foundstone projects are managed using Foundstone's proven Security Engagement Process (SEP) for project management. This process ensures continual communication with your organization to ensure the success of all Foundstone consulting engagements.
